

It's bracket time and college basketball enthusiasts can now get a friendly leg up with college basketball players' stats that have only previously been available to the experts: coaches, scouts and more. It's the brainchild of the DigitalSports.com and Vantage Labs' iSEEK Supercruncher, a data aggregation platform. Together, we've launched the free tool on DigitalSports.com, giving sports fans access to player data that has not been available to the public in this format. The tool puts individual game statistics for each player, season totals and more on display so fans can more accurately predict who will make it to the NCAA finals.

We have compiled multiple sources of NCAA Men's Basketball statistics across the past four years for both season totals and game-by-game stats to allow users to analyze and predict the outcome of the March Madness Tournament. iSEEK Supercruncher will allow a user to dynamically filter through years of statistics and visualize them in more meaningful ways to find correlations between winners and losers to enable them to accurately predict the outcome of each game played.

Data provided: *Student Demographics, Team Information, Season Totals, Game-by-Game Statistics*

You'll get unrestricted access to the most insightful college basketball content on the web, including...

- All of the data that many of the nation's most successful coaches use.
- Detailed statistical breakdowns of every team and player in Division I.
- Predict the outcome for every Division I game this season, along with a forecast of a team's final conference and overall record.
